Major Joseph Boland  
Hq USAF - SAFL - 3  
RM 5 D 916 The Pentagon  
Washington 25 D.C.

My dear Major Boland;

So long ago that I am embarrassed to recall how long, I shared a observation of mine with Colonel [REDACTED]. He gave me your address, and suggested that I write to you about it. I failed to do so, in the pressure of things - and because the whole thing seemed a bit foolish. However, I feel sheepish every time I visit where the Colonel is a patient for not having written, so here goes!

On Tuesday, 13 January 1959, at about 1655 EST, I observed a strange object in the sky. I was driving at the time, watched the object for a mile or so of driving, and then parked the car and continued observation until it disappeared. Within 15 minutes I was home, and instantly sat down and made notes. I enclose the sheet of scribbled notes made at that time. If convenient kindly return it to me.

I was driving on route 202 about 4 miles northeast of Norristown, Penna - driving toward Norristown. The sun was only a few degrees above the horizon.

I noticed this object ahead of me through the windshield, about 10 degrees above the horizon, and about 10 degrees south of the setting sun.

It was shaped like a cigar. Its axis was vertical, as observed. Length about half the apparent diameter of the sun. Its color was like golden sunlight - the sun itself was then quite red.

My first reaction was a cloud. On many counts that was rejected (no adjacent clouds; its shallness and sharply defined and stable outline; its ultimate observation ~~through~~ <sup>beyond</sup> a bar of horizon cloud, of which I shall write later in these notes)

Second reaction was the moon. That was soon rejected (wrong shape and size; too rapid descent and I think the calendar for that date shows moon at another phase than just past new moon)

As I drove for five minutes before parking, the object seemed to be descending slowly toward horizon. As I observed from the parked location it descended further and went behind a small bar of horizon cloud. It reappeared below that bar of cloud! It was too faint in the denser horizon atmosphere, and twilight, so that I gave up observations at 1705. The sun had set somewhere between 1655 and 1705.

I was alone. After parking I made comparative observations, with and without the car window intervening - and with and without my bifocals! Visible under all conditions.

I would appreciate any comment you have to make. Whenever anyone claimed to have seen things in the sky, I have at least inwardly smiled! Although a priest by vocation ([REDACTED] here, and a civilian chaplain at [REDACTED] Army Hospital) I have had considerable technical and engineering training, and continuing interest (studied astronomy in College long ago) and have had considerable military training (though not service) in my youth in the 1920s. My son is a Regular Army Infantry Officer ([REDACTED]) currently learning Arabic in the FAST program. So, we haven't yet acquired a reputation as screwballs!

Cordially yours  
[REDACTED]

Tuesday, 13 Jan 59

@ abt 1655 EST

Sun only a few degrees above horizon

Brilliant object in sky

sighted as I was looking south on 202  
a little east of terminus of Duck St

seemed to be at ~~abt~~  $10^{\circ}$  above horizon

$\circ 10^{\circ}$  south of setting sun

shape like a cigar

axis vertical as viewed

color like golden sunlight (sun then rose red)

seemed moving toward horizon very slightly

seemed to change axis slightly <sup>for a few minutes</sup> several times

observed as I drove on 202, & on Duck St to 9th Pike

$\circ$  of 9th Pike for  $\frac{1}{8}$ th mile, & then parked & watched  
sun with a night glasses

this bar of light a few degrees above horizon  
object disappeared below it, & in minute or so  
reappeared below it

pink & smaller

sun had set

drove off about 1705
